Fine Pewter Hardware

naturally
Pewter

2020
Cabinet Hardware

It has been twenty years since we started manufacturing our range of Fine Pewter Hardware, during that time we have seen the business grow into one of the most design led hardware companies in the UK.

Our range has grown into one of the most design led and innovative collections of door and cabinet hardware in the UK. We sell to a number of countries worldwide from our newly extended factory in Co. Durham, England.

We have designed new products this year to celebrate our 20th anniversary. Our team of skilled designers and makers, manufacture every product using a mixture of modern machinery and good old hand skills that we have built up over the last two decades.

We are lucky enough to have a large range of customers within a number of industry sectors including;

Kitchen Makers - Interior Designers - Joinery Manufacturers - Architects - Ironmongery Showrooms.

Hand **CRAFTED**

A unique set of skills are used at our factory, many of which have been gained over a number of years. The recruitment and training of young people has been the main stay of our business from the start, our modern 32,000 sq ft factory provides a working area that conforms to today's expectations of not only our workforce but our customers as well.

Naturally **PEWTER**

Pewter is an ageless material with a warm and lustrous quality.

We use fine Pewter (92% Tin) refined and smelted in our own factory to very specific requirements demanded by our products.

Due to its unique properties it will not rust and is completely recyclable which is unique in our industry.

Over the last 20 years we have had the pleasure to supply cabinet hardware to hundreds of designers & manufacturers around the world.

With over 100 unique designs this brochure has been put together to coincide with our 20th anniversary of manufacturing door & cabinet hardware in the UK.

Our new look pages show fantastic lifestyle examples supplied by some of our customers, over 20 ranges of matching hardware with detailed information to help you choose the perfect design for your home.

TECHNICAL

INFORMATION

FINISH – PEWTER WILL NOT RUST

Finesse products are made from 100% Pewter and have fantastic natural anti-corrosion properties, not to be confused with cheaper alternatives often described as Pewter 'Finish' 'Effect' or 'Patina' usually meaning coated or painted onto a cheap base metal. Genuine Pewter is an ageless lustrous metal. Its origins have great antiquity but today is made to the European standard EN6711 which guarantees a minimum 90% Tin (the fourth valuable metal in use in the world).

All Finesse internal parts and external fixings are made from brass or stainless steel to offer longevity and corrosion resistance.

A specially formulated lacquer is applied to all items intended for external use, this provides additional resistance to weathering and sunlight.

Genuine Pewter will over time take on a natural patina, the original finish can be maintained by following our simple maintenance guidelines.

MAINTENANCE CARE & CLEANING

With a minimum of care pewter will keep its original finish. Internally it can be washed with warm soapy water or with a mild detergent solution, and dried with a soft cloth. Externally we recommend you clean your hardware every 3 to 6 months using the same regime above. If left longer and the pewter has darkened apply a light coat of non-abrasive metal polish i.e 'brasso' and buff vigorously when dry to a shine, repeat the process as required. Do not under any circumstances use solvent based household cleaners, polishes or aerosols as these will cause irreversible damage to the pewter surface.

All hardware of any material is at risk from a mix of moisture and lime dust in building site environments and should be protected as much as possible, ideally fitting only when construction is advanced and the site dry and clean. Oil internal moving parts as required when dry. Leather products can be cleaned using a light coat of clear shoe cream and buffed.

Clear wax polish can be used to clean our genuine wood items as required.

INDUSTRY STANDARD ASSURANCE: BS EN 1670

Tested to ISO 9227 :2012 salt spray test Evaluated to BS EN 1670: grade 5 (480 hours) Building Hardware Resistance test. Pewter is 100% recyclable.

FIXINGS

All Finesse products come complete with all necessary fixings.

Cabinet Hardware:

- Cabinet Knobs/Cup/Pull/Handles: 25mm bolts supplied as standard.
- Bar Handles: 45mm snap-off bolts supplied (snap-off to size = door thickness +5mm)
- Two Part Knobs: PCK001/003/004/011/FD223/289 –45mm snap-off bolts (snap-off to size =door thickness +5mm). Note if your cabinet doors are thicker than 19mm we recommend the use of our fixing screw extension (FSE), this further supports the two-part knob from over tightening in daily use.
- We recommend drilling a 5mm Ø pilot hole for all M4 fixings.

Door Hardware:

- Standard Door Levers: 25mm stainless steel dome head screws plated pewter. Solid Steel spindle 90mm x 8mm x 8mm (trim to size =door thickness + 40mm/ 20mm either side)
- Multipoint Door Levers: M5 x 90mm stainless steel c/s bolt plated pewter (Trim to size to fit =door thickness + 40mm). M5 Grub screws cone point (screw into the split spindle spline using the allen key provided). Multipoint door lever fixing bolts- M5x90mm stainless steel counter sunk bolts coloured to match pewter. (Trim to size = door thickness + 5mm).

Window Espagnolettes:

- Window to frame locking mechanism fixings: M5 x 50mm stainless steel c/s bolts plated pewter (trim to size).
- Locking/Security Mechanism: M4 Grub screw (lock or unlock with custom 'Finesse' allen key provided). Take care that the grub screw is fully unwound before closing the window to avoid marking the pewter mounting plate when operating the handle.
- Spindle cast into handle, 40mm long (7mm x 7mm), trim to size.

ACCOYA WOOD

Pewter will not react to materials such as Accoya due to its anti-rusting properties and our use of stainless steel fixings and brass bearings. We recommend you strictly follow the Accoya preparation guidelines of applying a fully factory applied finish or at least 3 layers of paint behind the hardware to provide a partial isolation barrier between the hardware and the wood. For more information about fitting hardware to Accoya refer to the essential coatings guide that is provided on their website.

FITTING

Care should be taken when fitting Finesse Hardware. Make sure pilot holes are drilled before fitting screws, doors should be finished before adding your hardware to avoid paint and other finishes getting onto the product.

All Finesse Door Levers are supplied fully sprung.

Multipoint Levers and Door Knobs are by necessity supplied unsprung so pairing with a heavy duty double sprung latch or lock is recommended.

GET IN TOUCH

Call: 01207 500050

Speak to one of our friendly staff who are on hand to take your orders and enquiries.

Our telephone lines are open:
Monday-Thursday 9:00am – 5:00pm
Friday 9:00am – 2:30pm

Email us: sales@finessedesign.com

Social Media: Join Us

We are very active on Social Media platforms, it's a great way to not only promote our products but to show our customers some of the amazing projects we are involved in, we are happy to promote our trade customers. Just send us your images showing our products being used and we will shout about it for you.

Follow us on Facebook, Instagram, Pinterest and Twitter.
